

Project Executable Files

Date	05 JULY 2026
Team ID	SWTID-2026-2423
Project Name	Emotion Detection & Learning Support Engine
Maximum Marks	3 Marks

Project Executable Files

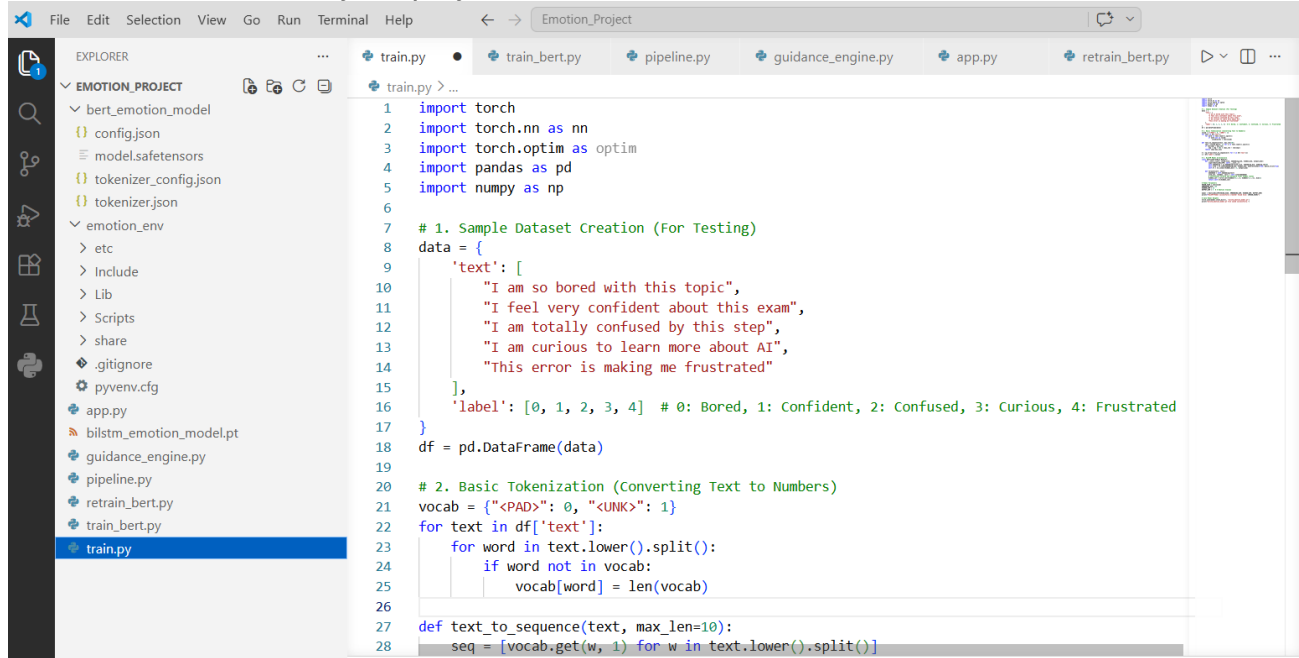

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

1 import torch
2 import torch.nn as nn
3 import torch.optim as optim
4 import pandas as pd
5 import numpy as np
6
7 # 1. Sample Dataset Creation (For Testing)
8 data = {
9     'text': [
10         "I am so bored with this topic",
11         "I feel very confident about this exam",
12         "I am totally confused by this step",
13         "I am curious to learn more about AI",
14         "This error is making me frustrated"
15     ],
16     'label': [0, 1, 2, 3, 4] # 0: Bored, 1: Confident, 2: Confused, 3: Curious, 4: Frustrated
17 }
18 df = pd.DataFrame(data)
19
20 # 2. Basic Tokenization (Converting Text to Numbers)
21 vocab = {"<PAD>": 0, "<UNK>": 1}
22 for text in df['text']:
23     for word in text.lower().split():
24         if word not in vocab:
25             vocab[word] = len(vocab)
26
27 def text_to_sequence(text, max_len=10):
28     seq = [vocab.get(w, 1) for w in text.lower().split()]
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	http://localhost:8501
Login Credentials (Demo)	[Provide demo username and password for evaluator access]
Platform / Hosting Provider	chrome
Repository Link	https://github.com/mavurisahithi-debug/GOOGLE-CLOUD-GEN-AI-Track-Project
Demo Video Link	"C:\Users\cheta\Videos\Screen Recordings\Screen Recording 2026-07-09 224444.mp4"

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:
 [List required software, versions, and system requirements]

Step 1: [e.g., Clone the repository: `git clone <url>`]
 Step 2: [e.g., Install dependencies: `pip install -r requirements.txt`] Step
 3: [e.g., Configure environment: copy `.env.example` to `.env`] Step 4:
 [e.g., Run database migrations: `python manage.py migrate`] Step 5:
 [e.g., Start the application: `python manage.py runserver`] Step 6:
 [e.g., Open browser at `http://localhost:8000`]

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Cold-Start Delay: Render's free tier spins down the web service when inactive, causing the initial page load or model loading phase to feel unresponsive.	Status: Active. Wait 30–50 seconds on the first request for the underlying application instance to wake back up.
2	Extreme Data Values: Submitting string representations inside empty mathematical array properties triggers validation processing warnings.	Workaround: JavaScript form fields explicitly use numeric input attributes to strip incorrect formats before passing objects to the API.
