

Communication

Date	05 JULY 2026
Team ID	SWTID-2026-2423
Project Name	Emotion Detection & Learning Support Engine
Maximum Marks	1 Mark

Communication Plan:

Effective communication plays a vital role in the successful development of the **Emotion Detection & Learning Support Engine**. Throughout the project lifecycle, team members maintained regular communication to discuss project progress, assign tasks, resolve technical issues, and review completed work. Continuous interaction with the project guide and stakeholders helped ensure that the project met the required objectives, timelines, and quality standards. Various communication channels were used to coordinate activities, share updates, collect feedback, and monitor project development effectively.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	Google Meet / Microsoft Teams	All Team Members	Discuss daily tasks, assign responsibilities, and monitor project progress.
2	Progress Update	Weekly	Google Meet / WhatsApp	Team Members & Project Guide	Review weekly achievements, discuss pending work, and receive guidance.
3	Issue / Bug Discussion	As Needed	WhatsApp / GitHub / Google Meet	Development Team	Identify technical issues, debug errors, and implement appropriate solutions.
4	Stakeholder Review	Bi-Weekly	Google Meet / Presentation	Project Guide & Team Members	Demonstrate project progress, collect suggestions, and improve system functionality.
5	Final Demo Rehearsal	Once	Google Meet	Machine Learning Team	Evaluate dataset quality, model accuracy, and training performance.
6	UI/UX Design Discussion	Weekly	Figma / Google Meet	Frontend Developers	Review interface design, user experience, and implement necessary improvements.
7	Database Review	Weekly	Google Meet	Backend Developers	Verify database structure, user records, and emotion history management.
8	Final Demo Rehearsal	Once	Classroom / Google Meet	Entire Project Team	Practice final project presentation and verify complete system functionality.

Communication Challenges & Resolutions:

S.No	Challenge Faced	Resolution / Action Taken
1	Difficulty in achieving high emotion detection accuracy due to variations in facial expressions and lighting conditions.	Improved image preprocessing, applied data augmentation techniques, and retrained the CNN model using a larger dataset to improve prediction accuracy.
2	Integration issues between the machine learning model and Flask backend.	Standardized API communication, optimized backend code, and performed integration testing to ensure smooth interaction between all modules.

3	Delays in task completion due to dependency between frontend and backend development.	Conducted regular team meetings, redistributed tasks based on individual expertise, and followed a structured development schedule to complete the project on time.
