

Demonstration of Proposed Features

Date	05 July 2026
Team ID	SWTID-2026-2423
Project Name	Emotion Detection & Learning Support Engine
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document captures all the features that were proposed during the project planning phase and tracks whether each feature was successfully implemented and demonstrated. It serves as evidence of the team's ability to deliver on the proposed solution.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Glassmorphic Multi-Channel Form UI	A responsive dark-mode front-end layout featuring dynamic animated CSS gradient blobs, input character validation counters, and multi-state selection toggle parameters.	Implemented	yes	Fully dynamic form inputs map context attributes prior to backend transmission.
2	Asynchronous Form Handlers	Vanilla JavaScript Fetch API configurations capture click triggers and direct AJAX payload POST operations asynchronously to prevent interface lock-ups.	Implemented	yes	The interface remains live during active network execution requests.
3	Context-Aware Dynamic Prompt Builder	A server-side token synthesis array inside Flask maps custom system directives via TONE_DESCRIPTIONS and PLATFORM_TIPS maps.	Implemented	yes	Eliminates generic outputs by engineering hyper-focused instruction blocks.
4	High-Speed Groq Cloud API Gateway	Secure back-end integrations stream processing queries straight to the advanced llama-3.3-70b-versatile LLM infrastructure.	Implemented	yes	Returns premium generation responses under a strict 2-second threshold.
5	Strict JSON Structural Validator	A custom regex extraction mechanism (extract_json) isolates array bounds from raw model outputs to handle parsing noise.	Implemented	yes	Guarantees error-free runtime conversions of API response payloads.
6	Caption Variation Stack Module	Renders exactly three highly targeted, platform-optimized captions wrapped inside separate glass card components.	Implemented	yes	Displays distinct copy approaches for easy client selection.
7	Dynamic Tag Cloud Matrix	Generates ten relevant marketing hashtags grouped as chip elements that automatically balance viral trends with niche parameters.	Implemented	yes	Eliminates manual research tasks by organizing data streams inside simple UI chips.
8	High-Conversion CTA Bullet Deck	Renders three action-oriented call-to-action phrases restricted to short, urgency-driven structures under 10 words.	Implemented	yes	Delivers strong marketing statements optimized to drive conversion behaviors.
9	One-Click Clipboard Interactivity	Client-side scripting hooks execute native copy functions, instantly modifying buttons into green success checkmarks for 2 seconds.	Implemented	yes	Enhances user workflow efficiency during high-volume copy operations.

10	Ngrok Public Tunnel Host Execution	Automated scripts utilize pyngrok dependencies to open public secure HTTPS gateways straight to local servers.	Implemented	yes	Allows external reviewers to interact with live platform modules effortlessly.
